**AMENDMENT**

**IN THE SPECIFICATION**

-----Please amend the paragraph on page 5, lines 5-13 as follows:-----

The component 12 includes a component bore 38 which is substantially aligned with the limiter bore 48 of the plastic intake manifold 10[[12]]. The component bore 38 is of sufficient diameter to receive the fastener 14. The aligned bores 38 and 48 receive the fastener 14, securing the plastic intake manifold 10 to the component 12. When the fastener 14 is installed, the head 40 of the fastener 14 contacts and bears down against the upper surface 42 of the compression limiter 16 and the upper surface 44 of the plastic intake manifold 10. As the fastener 14 applies pressure to the compression limiter 16, the plurality of feet 24 contact the contact surface 46 of the component 12, transmitting the bolt load to the component 12.
